

## OUR MATERIALS

### NOMAD LEATHER

Nomad leather, also known as a long-lived one, is a full-grain pull-up leather of the highest quality. It has been soaked with oil, thanks to which the wallet changes its appearance over time. It lightens in its folds and easily scratches, creating a natural vintage look. However, it is possible to restore its original appearance by polishing.

### HUNTER LEATHER

Hunter leather is high-quality pull-up leather. Its surface has been polished, soaked in a special oil, and finally coated with a wax that allows the wallet to age beautifully, which creates a natural worn-out and second-hand look.

### THE ORIGINAL LEGENDARY VINTAGE SADDLE LEATHER

The Original Legendary Vintage Saddle leather is a material processed with plant-based tanning substances. For centuries it has been used to manufacture high-quality, comfortable saddles. It gains its water-resistant yet elastic properties thanks to the thin layer of wax which, when heated up, soaks into the leather's structure. Over time and due to usage, the leather changes - it gets scratched, its colour transforms in the folds, and a rich patina is developed. Also, the leather becomes even more supple and elastic. The Original Legendary Vintage Saddle leather is appreciated for its raw beauty, durability, and versatility, and is used not only for saddles but also for a whole variety of leather products.

## ITALIA LEATHER

Italia leather is a modern half-matte-finish leather, which is available in a wide range of vibrant colours. The surface of the leather has been sprayed with a colour aniline dye. Thanks to this the natural growth marks and the structure of the leather are preserved and still visible on the finished product. This is a unique feature of our natural, full-grain leather. Being a semi-veg-tanned leather, Italia leather is exceptionally soft and pleasant to the touch, yet strong and durable. In addition, the leather has been covered with a water-repellent varnish, which makes it dirt-resistant.

## DURABLE ALUMINIUM

Aluminium Alloy AW-6063 is a durable and light material, characterised by high corrosion resistance and excellent extrudability, which means the ability to be formed into complex shapes. Combined with the "pul" mechanism, it creates an innovative, extremely handy, and safe wallet.
